

WNA

巻頭言 一儿

The woman neurosurgeons can all the things very well as men did in China !

Prof. Shu-yuan Yang, M.D Director

Tianjin Medical University-Tianjin, China

It is my great pleasure to write the newsletter for the 32nd edition of the woman's neurosurgical association of Japan. This Woman's Neurosurgical Association (WNA) of Japan is one of the largest Societies in Asia and in the world as well which has large number of woman neurosurgeons as members. As I know, Professor Yoko kato, the founder of Japanese woman's Neurosurgical Association suggested in 1997 to organize the Asian WNA. She with the help of Prof. Tetsuo Kanno has complimented many equipments and neurosurgical books to the departments of neurosurgery in many countries and has been training clinical fellow in their department of neurosurgery at Fujita Health University in Japan. They have been giving various valuable lectures and conducting workshops, conferences in many countries in the world. They have valuable contribution to develop neurosurgery in Asia.

In china, there are only few woman neurosurgeons and among them most are working in neurosurgical centers like university hospitals etc. The woman neurosurgeons are hard working and can perform in par with their counterpart and also can look after their families. In the recent years, Chinese neurosurgery association pays more attention to woman neurosurgeons especially regarding their training, participation in scientific conferences and so on. We intend to establish the Chinese woman neurosurgeon's association and the first convention meeting will be held in shanghai in November 2005. I believe that this association in china will benefit woman neurosurgeons to grow up and will also set-up a close relationship with other Asian countries woman neurosurgeon's association.
