

**6<sup>th</sup> Biannual Meeting  
February 23-26, 2017**

**Hannover, Germany**

Dear Colleagues,

The International Intraoperative Imaging Society advances the integration of cutting edge technology into the OR to benefit our patients. A prerequisite, to employ this multimodal information for surgical decision-making, is a thorough knowledge of the technologies, their advantages, limitations and ultimately their value-add.

Experts in the fields will present the respective methods and discuss their current status and potential. The combination of introductory lectures, seminars, sessions with dedicated topics and free papers will provide in depth coverage of complex issues as well as a display of the breadth of clinical applications in the CNS and Spine.

Major topics:

**iMRI, iCT and iUS for adult and pediatric CNS and Spine Surgery**

**Optical Imaging, Fluorescence-Guided Neurosurgery**

**MR-guided Focused Ultrasound,**

**Interstitial Lasertherapy**

For more information on the conference and Abstract Submission, please go to
